

Networking Infrastructure – Practical Sheet

In Class Practical

Setting Up

You may need to have your own network set up to deal with this class, or a service client/host configuration for your virtual machines. See “setting up a VM network for teaching”.

Set up a simple DHCP server

Using what you know, set up your own dhcp server. (needs expanding)

Set up a DNS server

For the local network only, set up a forwarding dns server which covers your two client machines.
