

# User Authentication – Practical Sheet

## ***In Class Practical***

### **Setting Up**

Only a terminal is required for this class.

### **Add a new user**

Add a user called 'testuser' to the system, Firname Test, last name User.

### **Allow new user to access a directory**

Give a newly created directory to your new user.

### **Enable executable access to supplied file**

Copy a file into your new directory and add the executable permissions.

### **Remove all permissions from file**

Remove all permissions from the file.

### **Delete new user**

Delete the testuser from the system.

## ***Homework***

Using the overview introduction and online sources, setup and configure a test OpenLDAP server on your home machine.
